

DBWorks 2004

SolidWorks® Document & Project Management

Project Centric Layout

DBWorks 2004 optimized Project Tree graphical user interface provides a hierarchical view and search capabilities on your projects and documents. The Project Tree can show any database field as a column keeping the most valuable information always visible, while specific icons highlight standard components. DBWorks 2004 offers the most comprehensive document management user interface.

Integrated to the Max

DBWorks 2004 for SolidWorks® assures the highest level of integration and full usage of all SolidWorks functionality. Switch to your SolidWorks document and back to DBWorks with standard Ctrl-Tab key. DBWorks supports all SolidWorks® complex document dependencies. DBWorks is a SolidWorks Gold Partner certified product, 100% compatible with all SolidWorks releases.

DBWorks Enhanced

DBWorks Enhanced is ideal for small SolidWorks workgroups where user flexibility is the main objective. Features :

DBWorks API
Material Wizard
Outlook style custom interface
Previous revision multiple visualization
Title block management
Category Maker
Category Browser
Assembly duplication Wizard
AutoCAD 200x integration
Word & Excel integration
Html Output

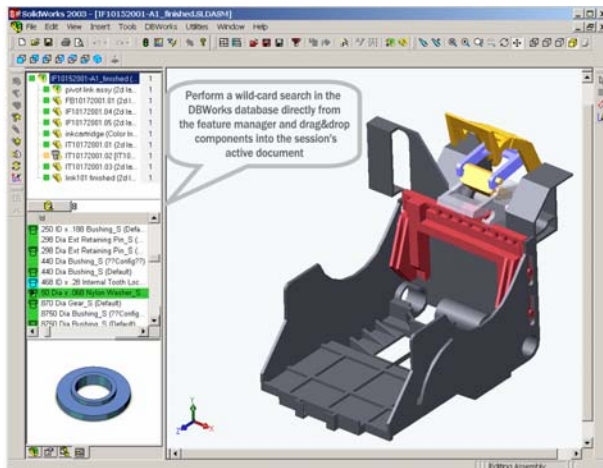

Revision Control
Batch plotting
Drawing/Part-Assembly link mode
DBWfilter enhanced search tool
DBWServer file security service
Project tree drag & drop support
User defined component quantities
Customizable BOM generator
Standard Parts support

Secure document revisions

DBWorks protects your design files with standard OS file security offering the highest performance in check-in/check-out operations (as much as 10x respect to vault based solutions). Activate , view and compare previous revisions as needed, including BOMs.

Integration at it's best

The **DBWorks feature manager** includes the full text search tool, giving access to the DBWorks database for easy search and placement of assembly or drawing components .

DBWorks Enterprise

DBWorks Enterprise offers the solution to all your data management needs. All DBWorks Enhanced features plus:

DBWorks Briefcase
Project assignment management
Local checkout mode
Operating system or DBWorks authentication

User rights manager
Integrated Workflow module with graphical process designer
Released database mode
Geographically distributed DBWorks sites with database and file replication

DBWorks Enterprise opt. modules

DBWorks Enterprise supports optional modules for enterprise collaboration and security. DBWorks 2004 User rights manager implements Class Documents giving each individual document specific rights. Together with Workflow you will have an audit trail, critical for regulatory compliance with ISO 9001 and FDA regulations, such as Rule 21 CFR Part 11 .

Geographically distributed DBWorks sites with database and file replication

User rights manager
Integrated Workflow module with graphical process designer

DBWorks Web Viewer

With the **DBWorks Web Viewer** you can publish your database and documents on the web and share them with your business partners. User access and functionality is controlled at the group level by the DBWorks User Rights Manager.

DBWorks StandAlone versions

. DBWorks Standalone provides non-SolidWorks users (purchasing department, shop floor etc.) a cost-effective access to the DBWorks database . The users can participate in the design process, view documents and prepare BOMs or other output needed for their department .
